Rotary Rake available in rear-mounted and pull-type version depending on the customer needs. Provided with 4 tandem pneumatic wheels that allow a perfect raking action and clean forage including on uneven grounds. Tandem axles have large distance between wheels in order to give the rake an optimum stability on slopes.

In the pull-type version the HIGHSPACE system and tandem wheels stability allow to lift the rake of 50 cm/20 inch. from the ground in order to keep working on the field without touching the windrows already made. Oil bath gearbox. Pivoting headstock, and mechanic crank for working height adjustment on the 3 point hitch version. The tangential tine arms provide optimum raking quality. Wheels 18.85-0. Cardan shaft with slip clutch.

The HIGHSPACE system allows the machine to be raised up to 50 cm. in order to drive over the windrows.

On the 3 point hitch version the compact design of the pivoting headstock allow the farmers to work on hilly conditions without any problems.

Working position.

Oil bath gearbox.
